Video Transcript – Fire Safety 365: Close Before You Doze

Before you go to sleep tonight, take one simple step that could save your life.

Close your bedroom door.

A closed door can slow fire, block smoke, and give you more time to escape.

Remember, close before you doze.

Visual description: The video compares two bedrooms following a fire. One bedroom remains relatively undamaged behind a closed door, while the other shows extensive smoke and fire damage. The video reinforces the importance of closing bedroom doors before going to sleep.
